

Figure 1: The Paradise study area can presently statistically support an additional 24,100 sf of retail and restaurant development.

Executive Summary

This study finds that the Paradise study area has an existing statistical market demand for up to 24,100 square feet (sf) of additional retail development producing up to \$5.7 million in sales.

Please find below a summary of the 2017 supportable retail:

5,700	sf	Grocery Stores
5,100	sf	Full-Service Restaurants
3,700	sf	Limited-Service Eating Places
1,800	sf	Apparel & Shoe Stores
1,700	sf	Special Food Services
1,500	sf	Hardware & Electronics
1,500	sf	Miscellaneous Store Retailers
1,100	sf	General Merchandise Stores
1,100	sf	Bars, Breweries & Pubs
900	sf	Gift Stores
24,100	sf	Potential Total Additional Supportable Retail

By 2022, this demand will likely generate up to \$6.0 million in gross sales. This new retail demand could be absorbed by existing businesses and/or with the opening of 11 to 14 new stores and restaurants. If constructed as a new single-site center, the development would be classified as a convenience center by industry definitions and could include a small grocery store, 2-3 full-service restaurants, 1-2 limited-service eating places, 1-2 special food services, one apparel and shoes store and an assortment of other retail offerings.

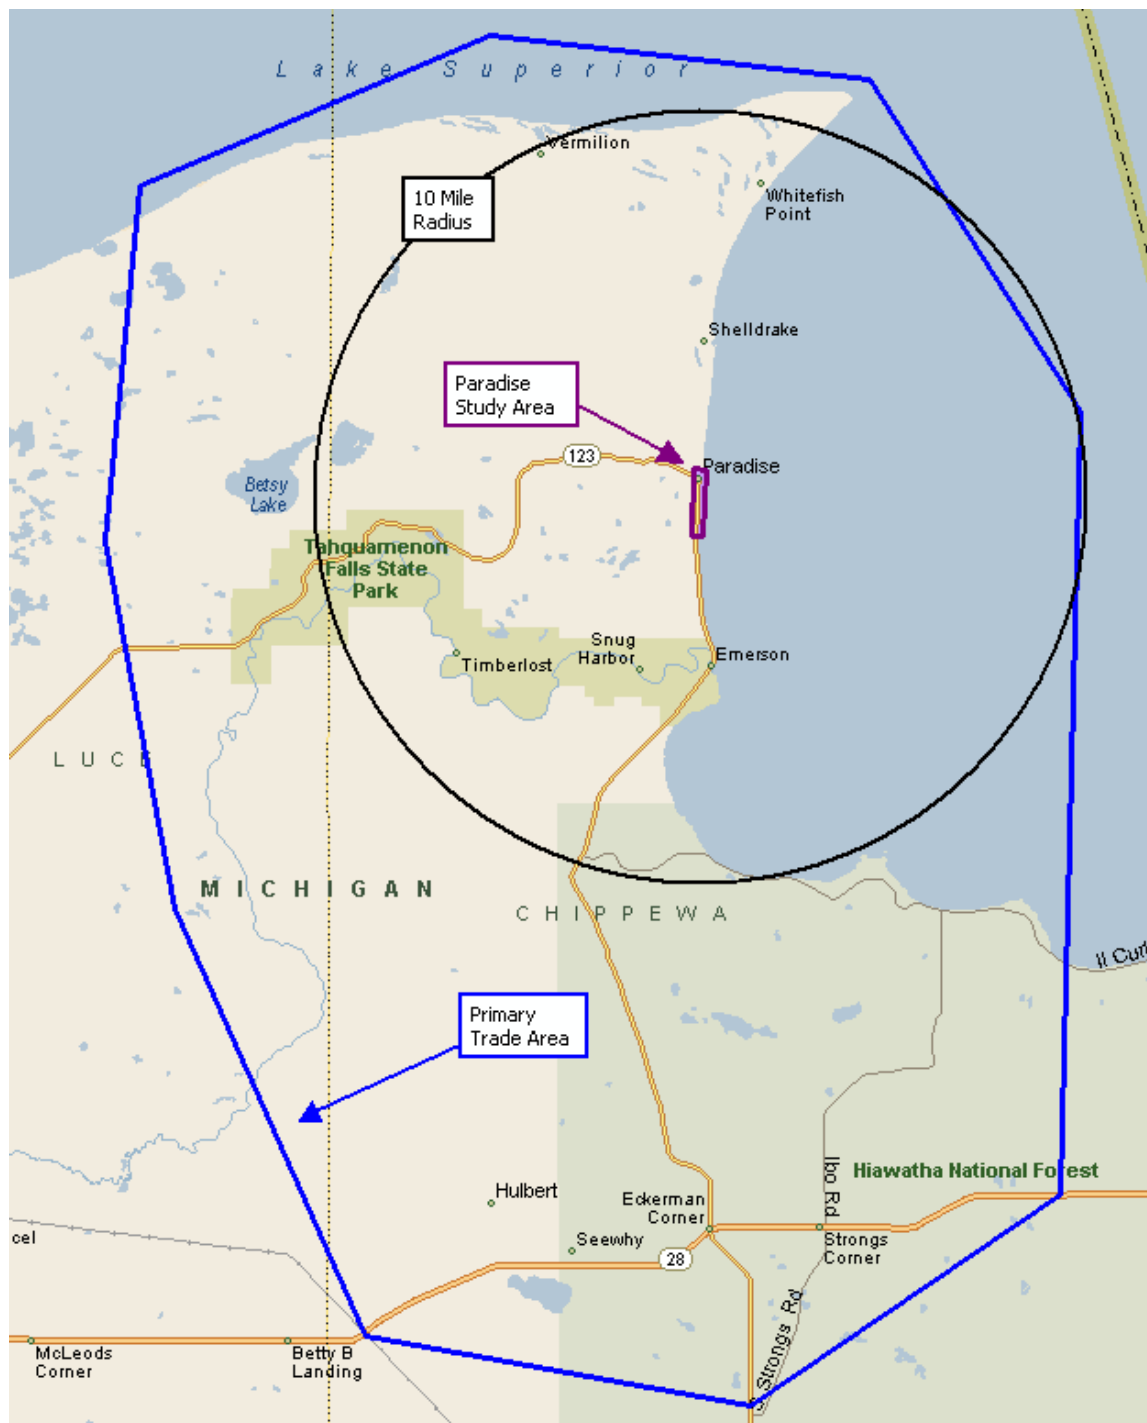

Figure 2: The Paradise study area has an approximate 721-square-mile primary trade area (shown above in blue).

Trade Area Boundaries

This study estimates that the Paradise primary trade area is limited by Lake Superior to the north and east, Route-28 to the south, and the Tahquamenon River to the west. The boundaries roughly equate to a 721 square-mile area or a 15-20 mile radius. Consumers inside the primary trade area will account for up to 60 to 70 percent of the total sales captured by retailers in the study area.

Trade Area Demographics

The primary trade area includes 1,190 people, which is expected to increase at an annual rate of 0.53 percent to 1,220 by 2022. The current 2017 households number is 590, which is also expected to increase to 610 at an annual rate of 0.60 percent. The 2017 average household income is \$52,400 and is estimated to increase to \$58,200 by 2022. Median household income in the trade area is \$40,900 and is estimated to increase to \$58,200 by 2022. Moreover, 18.3 percent of the households earn above \$75,000 per year. The average household size of 2.02 persons in 2017 is expected to decrease to 2.01 by 2022; the 2017 median age is 57.5 years old.

In comparison, the Eastern UP Counties, of which the trade area is a part, reports current average household income as \$57,300 and median household income as \$44,000. By 2022, the average household income will rise to \$63,900, with the median household income also rising to \$47,500. Population and household counts are expected to decrease, with annual growth rates through 2022 noted at -0.44% and -0.45%, respectively. The average household size is expected to decrease to 2.28 and the median age is expected to increase to 43.9 by 2022.

Table 1: Demographic Characteristics

<i>Demographic Characteristic</i>	<i>Primary Trade Area</i>	<i>Eastern UP Counties</i>	<i>State of Michigan</i>	<i>USA</i>
2017 Population	1,190	55,600	10,024,800	327,514,300

Table 1: Key demographic characteristics of the study area's primary trade area, compared to the Eastern UP Counties, State of Michigan and USA.

Assumptions

The projections of this study are based on the following assumptions:

- No other major retail centers are planned or proposed at this time and, as such, no other retail is assumed in our sales forecasts.
- No other major retail will be developed within the trade area of the subject site.
- The region's economy will stabilize at normal or above normal ranges of employment, inflation, retail demand and growth.

- The new retail development will be planned, designed, built, leased and managed as a walkable town center, to the best shopping center industry practices of the American Planning Association, Congress for New Urbanism, the International Council of Shopping Centers and Urban Land Institute.
- Parking for the area is assumed adequate for the proposed uses, with easy access to the retailers in the development.
- Visibility of the shopping center or retail is assumed to meet industry standards, with signage as required to assure good visibility of the retailers.

Table 2: 2017 & 2022 Supportable Retail Table

Retail Category	Estimated Supportable SF	2017 Sales/SF	2017 Estimated Retail Sales	2022 Sales/SF	2022 Estimated Retail Sales	No. of Stores
Retailers						
Apparel & Shoe Stores	1,800	\$195	\$351,000	\$205	\$369,000	1
General Merchandise Stores	1,100	\$185	\$203,500	\$195	\$214,500	1
Gift Stores	900	\$205	\$184,500	\$215	\$193,500	1
Grocery Stores	5,700	\$265	\$1,510,500	\$280	\$1,596,000	1
Hardware & Electronics	1,500	\$220	\$330,000	\$230	\$345,000	1
Miscellaneous Store Retailers	1,500	\$200	\$300,000	\$210	\$315,000	1
Retailer Totals	12,500	\$212	\$2,879,500	\$223	\$3,033,000	6
Restaurants						
Bars, Breweries & Pubs	1,100	\$240	\$264,000	\$250	\$275,000	1
Full-Service Restaurants	5,100	\$250	\$1,275,000	\$265	\$1,351,500	2 - 3
Limited-Service Eating Places	3,700	\$235	\$869,500	\$245	\$906,500	1 - 2
Special Food Services	1,700	\$225	\$382,500	\$235	\$399,500	1 - 2
Restaurant Totals	11,600	\$238	\$2,791,000	\$249	\$2,932,500	5 - 8
Retailer & Restaurant Totals	24,100	\$222	\$5,670,500	\$233	\$5,965,500	11 - 14

Table 2: The study site's primary trade area has demand for 24,100 sf of total new supportable retail and restaurants.

Methodology

To determine the amounts and types of retail supportable in the Paradise study area, GPG defined a trade area that would serve the retail in the study area based on geographic and topographic considerations, traffic access/flow in the area, relative retail strengths and weaknesses of the competition, concentrations of daytime employment and the retail gravitation in the market, as well as our experience defining trade areas for similar markets. Population, consumer expenditure and demographic characteristics of trade area residents were collected by census tracts from the U.S. Bureau of the Census, U.S. Bureau of Labor Statistics and Esri (Environmental Systems Research Institute).

Finally, based on the projected consumer expenditure capture (demand) in the primary trade area of the gross consumer expenditure by retail category, less the current existing retail sales (supply) by retail category, GPG projects the potential net consumer expenditure (gap) available to support existing and new development. The projected net consumer expenditure capture is based on

household expenditure and demographic characteristics of the primary trade area, existing and planned retail competition, traffic and retail gravitational patterns and GPG's qualitative assessment of the Paradise study area. Net potential captured consumer expenditure (gap) is equated to potential retail development square footage, with the help of retail sales per square foot data provided by Dollars and Cents of Shopping Centers (Urban Land Institute and International Council of Shopping Centers), qualitatively adjusted to fit the urbanism and demographics of the study area.

For the purposes of this study, GPG has assumed the following:

- Other major community retail centers may be planned or proposed, but only the existing retail is considered for this study. The quality of the existing retail trade in the study area is projected to remain constant. Gains in future average retail sales per sf reflect higher sales per sf in newly developed retail and selected increases in sales per sf by individual retail categories.
- No major regional retail centers will be developed within the trade area of this analysis through 2022 for the purposes of this study.
- The region's economy will continue at normal or above normal ranges of employment, inflation, retail demand and growth.
- The subject site is properly zoned to support infill and redevelopment projects with current and innovative standards, and the existing infrastructure (water, sewer, arterial roadways, etc.) can support additional commercial development.
- Annual population growth for the primary trade area is estimated to be 0.53 percent throughout the five-year period of this study.
- Employment distribution is projected to remain constant, without a spike or decline in employment by NAICS categories.
- The projected lease and vacancy rate model is based on our proprietary econometric model of the relationship between changes in employment and changes in vacancy and lease rates. Data was gathered from the U.S. Census Bureau, Esri and local brokerage services.
- Any new construction in the study area will be planned, designed, built and managed to the best practices of the American Institute of Architects, American Planning Association, American Society of Landscape Architects, Congress for the New Urbanism, International Council of Shopping Centers and The Urban Land Institute.
- Parking for new development projects or businesses will meet or exceed the industry standards.
- Visibility of any new retail is also assumed very good, with signage as required to assure easy visibility of the retailers.
- Infill or redevelopment projects in the study area will open with sustainable amounts of retail and anchor tenants, at planned intervals and per industry standards.

Limits of Study

The findings of this study represent GPG's best estimates for the amounts and types of retail tenants that should be supportable in the Paradise study area's primary trade area now and through 2022. Every reasonable effort has been made to ensure that the data contained in this study reflect the most accurate and timely information possible and are believed to be reliable. It should be noted that the findings of this study are based upon generally accepted market research and business standards. It is possible that the study site's surrounding area could support lower or higher quantities of retailers and restaurants yielding lower or higher sales revenues than indicated by this study, depending on numerous factors including respective business practices and the management and design of the study area.

This study is based on estimates, assumptions and other information developed by GPG as an independent third-party research effort with general knowledge of the retail industry, and consultations with the client and its representatives. This report is based on information that was current as of December 22, 2017, and GPG has not undertaken any update of its research effort since such date.

This report may contain prospective financial information, estimates, or opinions that represent GPG's view of reasonable expectations at a particular time. Such information, estimates, or opinions are not offered as predictions or assurances that a particular level of income or profit will be achieved, that particular events will occur, or that a particular price will be offered or accepted. Actual results achieved during the period covered by our market analysis may vary from those described in our report, and the variations may be material. Therefore, no warranty or representation is made by GPG that any of the projected values or results contained in this study will be achieved.

This study *should not* be the sole basis for designing, financing, planning, and programming any business, real estate development, or public planning policy. This study is intended only for the use of the client and is void for other site locations, developers, or organizations.

Data Note: Households with children include any households with people under age 18, related or not. Multigenerational households are families with 3 or more parent-child relationships. Unmarried partner households are usually classified as nonfamily households unless there is another member of the household related to the householder. Multigenerational and unmarried partner households are reported only to the tract level. Esri estimated block group data, which is used to estimate polygons or non-standard geography.
